

The Davis Group

Trusted Advisors for Delta Pilots since 1987

Referral Letter

We appreciate the chance to serve you here at The Davis Group.

We are working to expand The Davis Group financial and retirement planning services in an effort to reach as many Delta Pilots as we can. We thought you might be able to help.

If possible, could you take a minute and list any Delta Pilots you know could benefit from a complimentary comprehensive wealth management plan. Or, if you are part of or aware of any Delta Pilot groups or associations we should be aware of, please let us know.

You can do so by contacting Ray at:
ray.davis@raymondjames.com .

Best Regards,
Mark Davis

THREE WAYS THE DAVIS GROUP STRIVES TO EARN AND KEEP YOUR TRUST

Expertise and attention to details

Serving Delta Pilots since 1987, The Davis Group understands thoroughly Delta Benefit Plans. Because they have focused on the Delta Pilot's objective to maximize retirement benefits, you can trust they will help you reach your individual objectives.

Raymond James

Life well planned. That is the Raymond James philosophy. They seek to put you first – just as The Davis Group does. The trust The Davis Group has established with their Delta Pilot clients is only strengthened by the trust Raymond James has earned.

Complimentary Comprehensive Wealth Management Plan

Let The Davis Group demonstrate their expertise and start earning your trust with a complimentary Comprehensive Wealth Management Plan.

Be Prepared to Retire in a Volatile Market

Understanding the Net Investment Income Tax

Should I pay off my student loans early or contribute to my workplace 401(k)?

Be Prepared to Retire in a Volatile Market

Market losses on the front end of your retirement could have an outsized effect on the income you might receive from your portfolio.

In an ideal world, your retirement would be timed perfectly. You would be ready to leave the workforce, your debt would be paid off, and your nest egg would be large enough to provide a comfortable retirement--with some left over to leave a legacy for your heirs.

Unfortunately, this is not a perfect world, and events can take you by surprise. In a survey conducted by the Employee Benefit Research Institute, only 44% of current retirees said they retired when they had planned; 46% retired earlier, many for reasons beyond their control.¹ But even if you retire on schedule and have other pieces of the retirement puzzle in place, you cannot predict the stock market. What if you retire during a market downturn?

Sequencing risk

The risk of experiencing poor investment performance at the wrong time is called sequencing risk or sequence of returns risk. All investments are subject to market fluctuation, risk, and loss of principal--and you can expect the market to rise and fall throughout your retirement. However, market losses on the front end of your retirement could have an outsized effect on the income you might receive from your portfolio.

If the market drops sharply before your planned retirement date, you may have to decide between retiring with a smaller portfolio or working longer to rebuild your assets. If a big drop comes early in retirement, you may have to sell investments during the downswing, depleting assets more quickly than if you had waited and reducing your portfolio's potential to benefit when the market turns upward.

Dividing your portfolio

One strategy that may help address sequencing risk is to allocate your portfolio into three different buckets that reflect the needs, risk level, and growth potential of three retirement phases.

Short-term (first 2 to 3 years): Assets such as cash and cash alternatives that you could draw on regardless of market conditions.

Mid-term (3 to 10 years in the future): Mostly fixed-income securities that may have moderate growth potential with low or moderate volatility. You might also have some equities in this bucket.

Long-term (more than 10 years in the future): Primarily growth-oriented investments such as stocks that might be more volatile but have higher growth potential over the long term.

Throughout your retirement, you can periodically move assets from the long-term

bucket to the other two buckets so you continue to have short-term and mid-term funds available. This enables you to take a more strategic approach in choosing appropriate times to buy or sell assets. Although you will always need assets in the short-term bucket, you can monitor performance in your mid-term and long-term buckets and shift assets based on changing circumstances and longer-term market cycles.

If this strategy appeals to you, consider restructuring your portfolio before you retire so you can choose appropriate times to adjust your investments.

Determining withdrawals

The three-part allocation strategy may help mitigate the effects of a down market by spreading risk over a longer period of time, but it does not help determine how much to withdraw from your savings each year. The amount you withdraw will directly affect how long your savings might last under any market conditions, but it is especially critical in volatile markets.

One common rule of thumb is the so-called 4% rule. According to this strategy, you initially withdraw 4% of your portfolio, increasing the amount annually to account for inflation. Some experts consider this approach to be too aggressive--you might withdraw less depending on your personal situation and market performance, or more if you receive large market gains.

Another strategy, sometimes called the endowment method, automatically adjusts for market performance. Like the 4% rule, the endowment method begins with an initial withdrawal of a fixed percentage, typically 3% to 5%. In subsequent years, the same fixed percentage is applied to the remaining assets, so the actual withdrawal amount may go up or down depending on previous withdrawals and market performance.

A modified endowment method applies a ceiling and/or a floor to the change in your withdrawal amount. You still base your withdrawals on a fixed percentage of the remaining assets, but you limit any increase or decrease from the prior year's withdrawal amount. This could help prevent you from withdrawing too much after a good market year, while maintaining a relatively steady income after a down market year.

Note: Asset allocation is a method used to help manage investment risk; it does not guarantee a profit or protect against investment loss.

Understanding the Net Investment Income Tax

The 3.8% net investment income tax, sometimes referred to as the Medicare surtax on net investment income, originated in revenue provisions included in the Affordable Care Act of 2010. Unlike payroll tax revenues, funds collected from this surtax are deposited into the general fund of the U.S. Treasury; they are not applied to the Medicare Trust Fund.

It's been around since 2013, but many are still struggling to come to grips with the net investment income tax. The 3.8% tax, which is sometimes referred to as the Medicare surtax on net investment income, affected approximately 3.1 million federal income tax returns for 2013 (the only year for which data is available) to the tune of almost \$11.7 billion.¹ Here's what you need to know.

What is it?

The net investment income tax is a 3.8% "extra" tax that applies to certain investment income in addition to any other income tax due. Whether you're subject to the tax depends on two general factors: the amount of your modified adjusted gross income for the year, and how much net investment income you have.

Note: *Nonresident aliens are not subject to the net investment income tax.*

What income thresholds apply?

Modified adjusted gross income (MAGI) is basically adjusted gross income--the amount that shows up on line 37 of your IRS Form 1040--with certain amounts excluded from income added back in.

The net investment income tax applies only if your modified adjusted gross income exceeds the following thresholds:

Filing Status	MAGI
Married filing jointly or qualifying widow(er)	\$250,000
Married filing separately	\$125,000
Single or head of household	\$200,000

What is net investment income?

Investment income generally includes interest, dividends, capital gains, rental and royalty income, income from nonqualified annuities, and income from passive business activities and businesses engaged in the trade of financial instruments or commodities. Investment income does not include wages, unemployment compensation, Social Security benefits, tax-exempt interest, self-employment income, or distributions from most qualified retirement plans and IRAs.

Note: *Even though items like wages and retirement plan distributions aren't included in net investment income, they are obviously a factor in calculating MAGI. So higher levels of non-investment income can still make a difference in whether the net investment income tax applies.*

Gain from the sale of a personal residence would generally be included in determining investment income. However, investment income does not include any amount of gain that is excluded from gross income for regular income tax purposes. Qualifying individuals are generally able to exclude the first \$250,000--or \$500,000 for married couples filing jointly--of gain on the sale of a principal residence; any of the gain that's excluded for regular income tax purposes would not be included in determining investment income.

To calculate *net* investment income, you reduce your gross investment income by any deductible expenses that can be allocated to the income. So, for example, associated investment interest expense, investment and brokerage fees, expenses associated with rental and royalty income, and state and local income taxes can all be factored in.

How is the tax calculated?

You know your modified adjusted gross income. You know your net investment income. To calculate the net investment income tax, first subtract the threshold figure (shown above) for your filing status from your MAGI. Then compare the result with your net investment income. Multiply the lower of the two figures by 3.8%.

For example, assume you and your spouse file a joint federal income tax return and have \$270,000 in MAGI and \$50,000 in net investment income. Your MAGI is \$20,000 over the \$250,000 threshold for married couples filing jointly. You would owe \$760 (3.8% multiplied by \$20,000), because the tax is based on the lesser of net investment income or MAGI exceeding the threshold.

How is it reported?

If you're subject to the net investment income tax, you must complete IRS Form 8960, Net Investment Income Tax--Individuals, Estates, and Trusts, and attach it to your federal income tax return (you must file IRS Form 1040). The instructions for IRS Form 8960 provide an overview of the rules that apply and can be a good source of additional information. If you think you may be affected by the net investment income tax, though, it's a good idea to consider discussing your individual situation with a tax professional.

Should I pay off my student loans early or contribute to my workplace 401(k)?

For young adults with college debt, deciding whether to pay off student loans early or contribute to a 401(k) can be tough. It's a financial tug-of-war between digging out from debt today and saving for the future, both of which are very important goals. Unfortunately, this dilemma affects many people in the workplace today. According to a student debt [report](#) by The Institute for College Access and Success, nearly 70% of college grads in the class of 2014 had student debt, and their average debt was nearly \$29,000. This equates to a monthly payment of \$294, assuming a 4% interest rate and a standard 10-year repayment term.

Let's assume you have a \$300 monthly student loan payment. You have to pay it each month--that's non-negotiable. But should you pay more toward your loans each month to pay them off faster? Or should you contribute any extra funds to your 401(k)? The answer boils down to how your money can best be put to work for you.

The first question you should ask is whether your employer offers a 401(k) match. If yes, you

shouldn't leave this free money on the table. For example, let's assume your employer matches \$1 for every dollar you save in your 401(k), up to 6% of your pay. If you make \$50,000 a year, 6% of your pay is \$3,000. So at a minimum, you should consider contributing \$3,000 per year to your 401(k)--or \$250 per month--to get the full \$3,000 match. That's potentially a 100% return on your investment.

Even if your employer doesn't offer a 401(k) match, it can still be a good idea to contribute to your 401(k). When you make extra payments on a specific debt, you are essentially earning a return equal to the interest rate on that debt. If the interest rate on your student loans is relatively low, the potential long-term returns earned on your 401(k) may outweigh the benefits of shaving a year or two off your student loans. In addition, young adults have time on their side when saving for retirement, so the long-term growth potential of even small investment amounts can make contributing to your 401(k) a smart financial move.

All investing involves risk, including the possible loss of principal, and there can be no guarantee that any investing strategy will be successful.

Have you heard about the newest employee perk?

What's one of the most cutting-edge employee benefits right now? Company-provided student loan assistance for employees who are paying back student loans.

With a record amount of student loan debt attached to the incoming workforce (visit [finaid.org](#) to see a student debt clock that now tops \$1.3 trillion), companies that rely on a college-educated workforce--and want to attract and retain the best workers--are starting to offer student loan assistance to meet this immediate financial concern of many employees.

How do these programs work? Generally, an employer will contribute a certain amount each month toward an employee's student loans, typically from \$100 to \$250 per month, up to a lifetime cap (for example, \$10,000). Programs may restrict participation to employees who have been with the company for a minimum period of time, and may require employees to remain at the company for a certain period of time after they receive loan repayment benefits.

But participants beware: Unlike matching 401(k) contributions that companies may give to employees, money given to help repay

student loans is considered taxable income. Yet for college graduates facing thousands of dollars of debt and years of loan repayment, this employee benefit can be an attractive perk. Along with the actual financial help, borrowers may get a psychological boost from knowing that they have a plan in place to successfully pay off their loans and that their employer is invested in the outcome.

Even with the early hype, company student loan repayment programs are still a relatively uncommon employee benefit. According to a 2015 employee benefit survey by the Society for Human Resource Management, these plans were offered by only 3% of the more than 450 companies surveyed. Essentially, a handful of large employers that hire a large number of college grads are at the forefront of this trend.

Industry observers expect a lot of pent-up demand for this employee benefit as millennials' student debt burdens continue to garner widespread attention and employee retention efforts intensify as the economy improves. A company's contribution probably won't cover 100% of a young employee's student debt, but it might make a meaningful and welcome dent.
