Five Retirement Lessons from Today's Retirees

Social Security: Shoring Up America's Safety Net

What health services aren't covered by Medicare?

How much will health care cost?

Three Regrets of Retirees

A recent survey found that more than half of retirees have retirement planning regrets. Unfortunately, many of these retirees had to cut back on their lifestyles to compensate for financial shortfalls.¹

Considering their most common regrets may help you avoid making the same mistakes.

Not saving enough

More than one-third of retirees wish they had saved more.² How much is enough? The amount you need depends on your other sources of income and your anticipated retirement lifestyle.

It might be helpful to consider the 4% rule, a traditional guideline for the percentage of savings that you may be able to withdraw each year without depleting your nest egg over a 30-year retirement. For example, \$100,000 in savings would provide only \$4,000 in annual income. If you will need \$20,000 from your savings each year, you should have \$500,000 socked away by the time you retire. Withdrawing \$40,000 annually might require \$1 million in savings.

The longer you have before retirement, the more time you have to take advantage of long-term savings and compounding of potential returns.

If you have a workplace plan, you might start by saving enough to receive any employer match and then increase your savings percentage by 1% each year until you reach 15% or more. You may need to target a higher percentage if you get a late start. Even if retirement is coming soon, you might be surprised by how much you can save if you focus on that goal.

Relying too much on Social Security

Social Security was never meant to meet all your retirement income needs. The average 2019 monthly benefit of \$1,461 for a retired worker and \$2,448 for a couple would hardly provide a comfortable retirement. The 2019 maximum worker benefit of \$2,861 at full retirement age would be better, but that would require maximum taxable Social Security earnings for at least 35 years. If you postpone claiming Social Security after reaching full retirement age, your benefit increases by 8% annually. For example, if you were born in 1960 or later, your full retirement age will be 67 under current law, so working until age 70 would increase your benefit by 24%.³

According to the most recent trustees report, Social Security may be able to pay out only 77% of scheduled retirement benefits beginning in 2034, unless Congress takes action to strengthen the program.⁴ Considering the importance of Social Security, it seems unlikely that benefits will be reduced to that level, but this is another reason not to count too much on Social Security benefits for retirement income.

Not paying off debts

Carrying heavy debt can be a strain at any stage of life, but it can be especially difficult for retirees living on a fixed income. Paying off your home before you retire not only reduces your monthly expenses but also provides equity that could be tapped if necessary for future needs. Before paying off your mortgage, however, it might be wise to pay off credit cards and other high-interest loans.

The road to retirement can be challenging, but avoiding the mistakes made by those who have traveled before you may help you reach your destination with fewer regrets.

Five Retirement Lessons from Today's Retirees

EBRI consistently finds that setting a savings goal increases the level of confidence among today's workers. Despite that fact, just 42% of survey respondents have tried to determine a total retirement savings goal, and less than one-third have tried to calculate how much they may need for medical expenses. Of those who have calculated a total savings goal, 34% have found they will need \$1 million or more to retire comfortably.

Source: 2019 Retirement Confidence Survey, EBRI

Each year for its Retirement Confidence Survey, the Employee Benefit Research Institute (EBRI) surveys 1,000 workers and 1,000 retirees to assess how confident they are in their ability to afford a comfortable retirement. Once again, in 2019, retirees expressed stronger confidence than workers: 82% of retirees reported feeling "very" or "somewhat" confident, compared with 67% of workers. A closer look at some of the survey results reveals various lessons today's workers can learn from current retirees.

Current sources of retiree income

Let's start with a breakdown of the percentage of retirees who said the following resources provide at least a minor source of income:

- Social Security: 88%
- Personal savings and investments: 69%
- Defined benefit/traditional pension plan: 64%
- Individual retirement account: 61%
- Workplace retirement savings plan: 54%
- Product that guarantees monthly income: 33%
- Work for pay: 25%

Lesson 1: Don't count on work-related earnings

Perhaps the most striking percentage is the last one, given that 74% of today's workers expect work-related earnings to be at least a minor source of income in retirement. Currently, just one in four retirees works for pay.

Lesson 2: Have realistic expectations for retirement age

Building upon Lesson 1, it may benefit workers to proceed with caution when estimating their retirement age, as the Retirement Confidence Survey consistently finds a big gap between workers' expectations and retirees' actual retirement age.

In 2019, the gap is three years: Workers said they expect to retire at the median age of 65, whereas retirees said they retired at a median age of 62. Three years can make a big difference when it comes to figuring out how much workers need to accumulate by their first year of retirement. Moreover, 34% of workers reported that they plan to retire at age 70 or older (or not at all), while just 6% of current retirees fell into this category. In fact, almost 40% of retirees said they retired before age 60. The reality is that more than four in 10 retirees retired earlier than planned, often due to a health issue or change in their organizations.

Estimating retirement age is one area where workers may want to hope for the best but prepare for the worst.

Lesson 3: Income is largely a result of individual savings efforts

Even though 64% of current retirees have defined benefit or pension plans, an even larger percentage say they rely on current savings and investments, and more than half rely on income from IRAs and/or workplace plans. Current workers are much less likely to have defined benefit or pension plans, so it is even more important that they focus on their own savings efforts.

Fortunately, workers appear to be recognizing this fact, as 82% said they expect their workplace retirement savings plan to be a source of income in retirement, with more than half saying they expect employer plans to play a "major" role.

Lesson 4: Some expenses, particularly health care, may be higher than expected

While most retirees said their expenses were "about the same" or "lower than expected," approximately a third said their overall expenses were higher than anticipated. Nearly four out of 10 said health care or dental expenses were higher.

Workers may want to take heed from this data and calculate a savings goal that accounts specifically for health-care expenses. They may also want to familiarize themselves with what Medicare does and does not cover (e.g., dental and vision costs are not covered) and think strategically about a health savings account if they have the opportunity to utilize one at work.

Lesson 5: Keep debt under control

Just 26% of retirees indicated that debt is a problem, while 60% of workers said this is the case for them. Unfortunately, debt can hinder retirement savings success: seven in 10 workers reported that their non-mortgage debt has affected their ability to save for retirement. Also consider that 32% of workers with a major debt problem were not at all confident about having enough money to live comfortably in retirement, compared with just 5% of workers who don't have a debt problem.

As part of their overall financial strategy, workers may want to develop a plan to pay down as much debt as possible prior to retirement.

Social Security: Shoring Up America's Safety Net

Future projections

In 2019, the trustees of Social Security reported that the Old-Age and Survivors Insurance (OASI) trust fund is projected to run out in 2034. At that time, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ever since a legal secretary named Ida May Fuller received the first Social Security retirement check in 1940, Americans have been counting on Social Security to provide much-needed retirement income. For many older Americans, Social Security is their main source of guaranteed retirement income — income that continues throughout their lifetimes and is indexed for inflation every year (in 2019, the cost-of-living adjustment, or COLA, was 2.8%).

Social Security provides more than just retirement income, though. It also provides disability and survivor insurance benefits. About 62 million people — more than one in six U.S. residents — collected some type of Social Security benefit in 2018, with approximately 80% of these recipients receiving Social Security retirement or survivor benefits.¹

How Social Security works

Social Security is a pay-as-you-go system, which means that payments from current workers (in the form of payroll taxes) fund benefits for current beneficiaries. The payroll tax rate for Social Security is 12.4%, with 6.2% paid by the employee and 6.2% paid by the employer (self-employed individuals pay the entire 12.4%). These payroll taxes are deposited into the Old-Age and Survivors Insurance (OASI) trust fund (for retirement and survivor benefits) and the Disability Insurance (DI) trust fund (for disability payments).

Because of demographic and economic factors, including higher retirement rates and lower birth rates, there will be fewer workers per beneficiary over the long term, worsening the strain on the trust funds. This year, the trustees of Social Security reported that the OASI trust fund is projected to run out in 2034. After that, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ideas for reform

There has been little national consensus by policymakers on how to deal with Social Security's looming demographic challenges. Meaningful reform will require broad bipartisan support, and the trustees have urged Congress to address Social Security's challenges sooner rather than later, so that solutions will be less drastic and can be implemented gradually, lessening the impact on the public.

Some Social Security reform proposals on the table include:

- Raising the current Social Security payroll tax rate — according to the 2019 trustees report, an immediate and permanent payroll tax increase to 15.1% (up from the current 12.4%) would be necessary to address the

long-range revenue shortfall (16.05% if the increase started in 2035)

- Raising or eliminating the ceiling on wages currently subject to Social Security payroll taxes (\$132,900 in 2019)
- Raising the full retirement age beyond the currently scheduled age of 67 (for anyone born in 1960 or later)
- Reducing future benefits — to address the long-term revenue shortfall, the trustees have noted that scheduled benefits would have to be immediately and permanently reduced by about 17% for all current and future beneficiaries, or by approximately 20% if reductions were applied only to those who initially become eligible for benefits in 2019 or later
- Changing the formula that is used to calculate benefits
- Changing the formula that is used to calculate the annual cost-of-living adjustment for benefits

Understand your retirement benefits

The amount you'll receive from Social Security is based on the number of years you've worked, the amount you've earned over your lifetime, and the age when you file for benefits. Your benefit is calculated using a formula that takes into account your 35 highest earnings years, but you don't need to work for that long to qualify for retirement benefits. Generally, you need to have earned a minimum of 40 work credits, which is about 10 years of work in a job covered by Social Security. If you haven't worked long enough to qualify on your own, you may qualify for spousal benefits based on your spouse's work record. A spousal benefit claimed at your full retirement age is generally equal to 50% of the primary worker's full benefit.

You can get an estimate of your future Social Security retirement benefits by visiting the Social Security website at ssa.gov and using the Retirement Estimator tool or by viewing your Social Security Statement. Your personalized statement contains a detailed record of your earnings history, as well as estimates of the retirement, survivor, and disability benefits you can expect at different ages. To view your statement online, you'll first need to register. If you haven't registered online, you'll receive your Social Security Statement in the mail every year if you are age 60 or older and not yet receiving benefits.

What health services aren't covered by Medicare?

Original Medicare — Part A hospital insurance and Part B medical insurance — offers broad coverage, but many services are not covered.

Some may be fully or partially covered by a Part C Medicare Advantage Plan, which replaces Original Medicare, or a Medigap policy, which supplements Original Medicare. Both are offered by Medicare-approved private insurers. (You cannot have both a Medicare Advantage Plan and a Medigap policy.)

Whether you are looking forward to Medicare in the future or are already enrolled, you should consider these potential expenses.

Deductibles, copays, and coinsurance.

Costs for covered services can add up, and — unlike most private insurance — there is no annual out-of-pocket maximum. Medicare Advantage and Medigap plans may pay all or a percentage of these costs and may include an out-of-pocket maximum.

Prescription drugs. For coverage, you need to enroll in a Part D prescription drug plan or a Medicare Advantage plan that includes drug coverage.

Dental and vision care. Original Medicare does not cover routine dental or vision care. Some Medicare Advantage and Medigap plans may offer coverage for either or both of these needs. You might also consider private dental and/or vision insurance.

Hearing care and hearing aids. Some Medicare Advantage plans may cover hearing aids and exams.

Medical care outside the United States.

Original Medicare does not offer coverage outside the United States. Some Medicare Advantage and Medigap plans offer coverage for emergency care abroad. You can also purchase a private travel insurance policy.

Long-term care. Medicare does not cover "custodial care" in a nursing home or home health care. You may be able to purchase long-term care (LTC) insurance from private insurers.

A complete statement of coverage, including exclusions, exceptions, and limitations, is found only in the LTC insurance policy. It should be noted that LTC insurance carriers have the discretion to raise their rates and remove their products from the marketplace.

How much will health care cost?

Retirement health-care costs will vary depending on your health and longevity, but it may help to have a guideline. These are the estimated savings required for an individual or couple who turned 65 in 2019 to have a 90% chance of meeting expenses for Medicare Part B health insurance, Part D prescription drug coverage, Medigap Plan F, and out-of-pocket drug costs, assuming median prescription drug expenses.* These estimates do not include services not covered by Medicare or Medigap.

*Medigap Plan F is used for these estimates because it is the most comprehensive coverage available and simplifies the calculation. However, this plan may not be available for new beneficiaries after January 1, 2020. Current enrollees may keep Plan F, and most other plans will remain available for new enrollees.
