31.5%

Share of the total NIIT collected in 2019 paid by taxpayers with MAGIs of $10 million or more, with an average amount of $449,642. By comparison, taxpayers with MAGIs between $200,000 and $500,000 accounted for 14.1% of the total collected, and their average NIIT bill was $1,054.

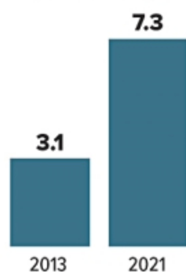
Investors Beware: This Surtax Is Creeping Up on You

High-income taxpayers are subject to a 3.8% net investment income tax (NIIT) from capital gains, dividends, interest, certain royalties, rents, and passive income if their modified adjusted gross income (MAGI) exceeds $200,000 for single filers or $250,000 for married joint filers. The number of taxpayers paying the NIIT has more than doubled since it took effect, mostly because these income thresholds were not indexed to inflation, and the revenue collected has more than tripled.

Number of taxpayers subject to NIIT (in millions)



NIIT revenue (in billions)

Key Retirement and Tax Numbers for 2024

Every year, the Internal Revenue Service announces cost-of-living adjustments that affect contribution limits for retirement plans and various tax deduction, exclusion, exemption, and threshold amounts. Here are a few of the key adjustments for 2024.

Estate, gift, and generation-skipping transfer tax

- The annual gift tax exclusion (and annual generation-skipping transfer tax exclusion) for 2024 is $18,000, up from $17,000 in 2023.
- The gift and estate tax basic exclusion amount (and generation-skipping transfer tax exemption) for 2024 is $13,610,000, up from $12,920,000 in 2023.

Standard deduction

A taxpayer can generally choose to itemize certain deductions or claim a standard deduction on the federal income tax return. In 2024, the standard deduction is:

- $14,600 (up from $13,850 in 2023) for single filers or married individuals filing separate returns
- $29,200 (up from $27,700 in 2023) for married joint filers
- $21,900 (up from $20,800 in 2023) for heads of households

The additional standard deduction amount for the blind and those age 65 or older in 2024 is:

- $1,950 (up from $1,850 in 2023) for single filers and heads of households
- $1,550 (up from $1,500 in 2023) for all other filing statuses

Special rules apply for an individual who can be claimed as a dependent by another taxpayer.

IRAs

The combined annual limit on contributions to traditional and Roth IRAs is $7,000 in 2024 (up from $6,500 in 2023), with individuals age 50 or older able to contribute an additional $1,000. The limit on contributions to a Roth IRA phases out for certain modified adjusted gross income (MAGI) ranges *(see table).* For individuals who are active participants in an employer-sponsored retirement plan, the deduction for contributions to a traditional IRA also phases out for certain MAGI ranges *(see table).* The limit on nondeductible contributions to a traditional IRA is not subject to phaseout based on MAGI.

MAGI Ranges: Contributions to a Roth IRA

	2023	2024
Single/Head of household	$138,000–$153,000	$146,000–$161,000
Married filing jointly	$218,000–$228,000	$230,000–$240,000
Married filing separately	$0–$10,000	$0–$10,000

MAGI Ranges: Deductible Contributions to a Traditional IRA

	2023	2024
Single/Head of household	$73,000–$83,000	$77,000–$87,000
Married filing jointly	$116,000–$136,000	$123,000–$143,000

Note: The 2024 phaseout range is $230,000–$240,000 (up from $218,000–$228,000 in 2023) when the individual making the IRA contribution is not covered by a workplace retirement plan but is filing jointly with a spouse who is covered. The phaseout range is $0–$10,000 when the individual is married filing separately and either spouse is covered by a workplace plan.

Employer-sponsored retirement plans

- Employees who participate in 401(k), 403(b), and most 457 plans can defer up to $23,000 in compensation in 2024 (up from $22,500 in 2023); employees age 50 or older can defer up to an additional $7,500 in 2024 (the same as in 2023).
- Employees participating in a SIMPLE retirement plan can defer up to $16,000 in 2024 (up from $15,500 in 2023), and employees age 50 or older can defer up to an additional $3,500 in 2024 (the same as in 2023).

Kiddie tax: child's unearned income

Under the kiddie tax, a child's unearned income above $2,600 in 2024 (up from $2,500 in 2023) is taxed using the parents' tax rates.

Individual Bonds vs. Bond Funds: What's the Difference?

Individual bonds and bond funds can both provide an income stream, but there are important differences. An individual bond can offer more certainty and stability than a fund, while a fund can offer diversification that might be difficult to obtain with individual bonds.

Coupon, maturity, and yield

An individual bond has a coupon rate — the annual interest rate paid on the face value of the bond — and a maturity date, which is the date the principal is returned to the borrower. If you hold a bond to maturity, you will receive any interest payments due during the time you own it (typically paid quarterly or semi-annually) and the full principal at maturity, unless the bond issuer defaults. If you sell the bond on the secondary market before maturity, you will receive the market price, which may be higher or lower than the face value or the amount you paid, depending on market conditions.

By contrast, a bond fund does not have a coupon rate or a maturity date (with the exception of certain defined-maturity funds). A fund typically pays monthly distributions based on the bonds in the fund. The rate can change as bonds are replaced (due to maturity or sales), and as market conditions change. A fund also has fees and expenses, which reduce the interest paid, and fund managers can adjust to market conditions in various ways, depending on the fund's objective. Because there is no maturity date, you can hold the fund as long as the fund company remains in business. However, there is never a guarantee that you will receive your principal no matter how long you hold the shares. Fund shares, when sold, may be worth more or less than your original investment.

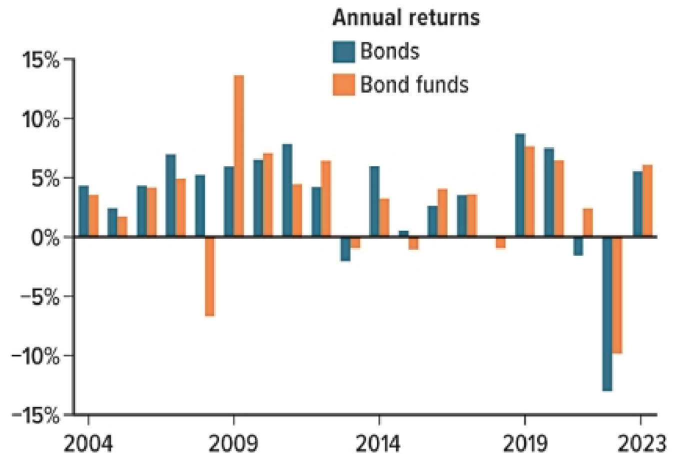
Yield is the expected return from a bond or bond fund, based on the interest rate and purchase price. If you buy a $1,000 bond at face value with a coupon rate of 4%, the yield is 4%. But if you buy the same bond on the secondary market for $800, the yield is 5%, because you receive interest based on the face value: 4% x $1,000 face value = $40 interest / $800 purchase price = 5% yield. Bond fund yields are more complex, but the 30-day SEC yield (or standardized yield) offers a helpful comparison. This is typically calculated using the maximum share price on the last day of the month and projects annual net investment income assuming it remains the same as the previous 30 days.

Interest rate sensitivity

Bonds and bond funds are sensitive to changes in interest rates. Generally, when rates rise, the market value of existing bonds and bond funds falls, because newly issued bonds pay higher interest rates. Conversely, when rates fall, the market value of existing bonds and bond funds rises. This only applies to market values and would not affect an individual bond held to maturity.

Varied Performance

Individual bonds and bond funds have performed differently over the past 20 years. In part, this is because fund managers may respond to the market in different ways; for example, they might try to preserve yield over share price or vice versa. Note that the performance of individual bonds only applies to values on the secondary market, not to bonds held to maturity.



Source: London Stock Exchange Group, 2024, for the period 12/31/2003 to 12/31/2023. Bonds are represented by the Bloomberg U.S. Aggregate Bond TR Index, and bond funds are represented by the Thomson US: All Gen Bond - MF Index. Expenses, fees, charges, and taxes are not considered. The performance of an unmanaged index is not indicative of the performance of any particular investment. Individuals cannot invest directly in an index. Rates of return will vary over time, particularly for long-term investments. Investments seeking higher rates of return involve a higher degree of risk. Past performance is no guarantee of future results. Actual results will vary.

If you owned bond funds during the period that the Federal Reserve was aggressively raising interest rates, you may have been frustrated as you watched the value of your shares drop. Now that interest rates seem to have stabilized, share values are likely to stabilize as well, and they may increase if rates begin to decrease. Bond funds typically replace underlying bonds as they mature, and new bonds added to funds over the last two years will generally pay higher interest rates, increasing the interest paid by the fund. Although it is impossible to predict future market direction, bond funds may be poised to offer solid returns if rates remain stable or begin to fall.

Diversification does not guarantee a profit or protect against investment loss. Funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Braving the Housing Market? An Assumable Mortgage Might Be the Solution

This past year, the housing market has experienced a perfect storm, with high interest rates and inflation resulting in reduced purchasing power for homebuyers. In addition, many current homeowners were reluctant to sell — and give up their lower mortgage rates — leading to lower housing inventory and higher home prices.

If you have been struggling to buy a home in the current market, one possible solution is to look for a home with an assumable mortgage. If you're thinking of selling your current home, having an assumable mortgage can make it more marketable and appealing to buyers.

When a mortgage is assumable, a buyer can take over the seller's existing mortgage and continue making payments on the original terms. This includes the interest rate, payment schedule, and remaining loan balance. In the current market, a buyer may be able to assume a mortgage with a more favorable interest rate than what they would be able to get when applying for a new home loan. To assume a mortgage, the homebuyer must meet the original lender's qualification requirements and pay closing costs.

One major drawback of an assumable mortgage is that the homebuyer must come up with a down payment that will make up any difference between the sale price and the outstanding balance on the original mortgage loan. This means that the homebuyer must either pay cash or take out a second mortgage to cover the remainder of the purchase price. For example, if a home is selling for $500,000, and the seller still owes $300,000 on the mortgage loan, the down payment would be $200,000. If the original loan has a low enough interest rate, an assumable mortgage could be advantageous for a homebuyer with access to enough cash or financing to cover the difference between the sale price and outstanding balance of the assumed loan.

Interest rates for fixed-rate mortgage loans rose to a 20-year high in late 2023.

Source: Freddie Mac, 2023

It's important to note that not all mortgage loans are assumable. As a result, finding a home with an assumable mortgage may be difficult, and if you do find one, competition may be fierce. Generally, assumable mortgages are limited to government-backed loans from the Federal Housing Administration (FHA), the U.S. Department of Veterans Affairs (VA), or U.S. Department of Agriculture (USDA). Unique terms, requirements, and fees may apply.
